

H2O from Duct Shield

Directly reachable. So much gas can reach ?
直接飛んでこれる？。進入量最多？

Almost impossible to reach because of many reflection on shields?
隙間を何度も反射しうるので、ほとんど吸着され来ない？

From Optical axis. It can directly reach or after at least one reflection on the inner shield/payload?
光学軸から、直接もありうるが、一回はInne Shieldやpayloadのどこかで反射して来うる？
